Fruit processing systems Our total solutions; usable anywhere

Choose Taks Handling Systems and enjoy labour cost savings, greater efficiency and top quality processing fruit after (pre)sorting. Our many years of harvest processing systems and internal transport experience have enabled us to develop innovative solutions based on a modular design. Do you have specific wishes? Our R & D is happy to collaborate with you on devising the correct complete solution. This allows you to create the ideal processing system with guaranteed quality, a long life cycle and low downtime.

Your total solution

The modular processing systems for fruit can be modified with options and customized solutions to meet specific circumstances or user requirements. With a broad spectrum of options such as strapping, wrapping machines and automatic registration for warehouse management, we are able to offer you a total solution for harvesting and processing all your products.

Our automated processing systems ensure your fruit is ready for transport in no time

Processing systems for fruit

Flexibility due to modular construction

The modular set-up of the Taks processing system enables you to arrange automatic transportation after the sorting line in accordance with your wishes. The systems are suitable for the complete automation of the internal transportation of cases, crates and boxes, including the palletization and transportation of empty and full pallets. The entire processing system can be expanded in such a way that the pallets are transported to the correct stock position. The modules were designed for various final packaging and stacking patterns. They are also suitable for different weights per packaging.

The system can be expanded with the following options:

- Strapping and wrapping machines
- Automatic registration for warehouse management
- Graders
- Packaging machines
- Check scales
